Partners & Time Allocation

Starter Checklist

Do you have a great proposal idea?

- ☑ Target observability
- ☑ ALMA Science Archive
- ☑ Observing parameters
- ☑ Technical feasibility (OT)
- ☑ Ancillary data (e.g., APEX)

Observing Strategy

Proposal Preparation Overview

CfP deadline: April 23

- **Create an ALMA account**
  https://asa.alma.cl/UserRegistration/newAccount.jsp?arc=eu
  - Permanent username
  - Select expertise keywords
- **Observing Tool (OT)**
  https://cycle-13.sps.alma.cl/ngot/
  - Design the Science Goals in OT, test project feasibility
- **Project preparation**
  - Prepare the science case (SJ; must be strictly anonymous)
  - Justify technical setup (TJ)

Timeline

Key considerations

→ Sensitivity required
→ Angular resolution
→ Spectral resolution
→ Target size scales

Range of angular scales

$$\lambda/B_{max} < \theta < \lambda/B_{min}$$

$$AR < \theta < MRS$$

AR: Angular Resolution
MRS: Maximum Recoverable Scale

Observing Strategy: Receiver Bands

Band	Frequency range [GHz]	Wavelength range [mm]	Type
1	35 – 50	8.5 – 6	SSB
2	67 – 116	4.5 – 2.6	2SB
3	84 – 116	3.6 – 2.6	2SB
4	125 – 163	2.4 – 1.8	2SB
5	158 – 211	1.9 – 1.4	2SB
6	211 – 275	1.4 – 1.1	2SB
7	275 – 373	1.1 – 0.8	2SB
8	385 – 500	0.78 – 0.60	2SB
9	602 – 720	0.50 – 0.42	DSB
10	787 – 950	0.38 – 0.32	DSB

One day to move an antenna

- Configurations: **C-1 to C-10**
- Maximum baselines: from **0.16 km** to **16 km**

https://almascience.nrao.edu/observing/observing-configuration-schedule/long-term-configuration-schedule

- **Highly encouraged projects**
  - Long baselines (C-7 to C-10) at lower frequencies (Bands 1–4)
  - High-frequency (Bands 8–10)
  - Stand-alone ACA (= no 12-m)

Outer boundary

Sets the angular resolution limit:

$\theta_{res} = \lambda/B_{max}$

Inner hole

Sets the MRS:

$\theta_{MRS} = \lambda/B_{min}$

➤ **Example:** I would like to image at ~2″ resolution the CO(1–0) line at 46.5 GHz (Band 1) in a ~15″-size source at redshift 1.5.

Using C-4: θ_{res} = 2.99″ × (40/46.5) = 2.57″ and θ_{MRS} = 28.0 × (40/46.5) = 24.1″ > 15″ 😊

Using C-5: θ_{res} = 1.80″ × (40/46.5) = 1.55″ and θ_{MRS} = 16.8 × (40/46.5) = 14.5″ ~ 15″ 😐

Configurations & Angular Scales

What if the target < MRS? → + C-(N-x) or 7-m

High resolution

Lower resolution

➤ The Observing Tool will automatically select a less extended array configuration (i.e., with larger θ_{res} and larger θ_{MRS}) to recover flux on larger scales.

What if the target < Primary Beam? → Mosaic

Primary Beam ≡ FOV ~ λ/D

ALMA Cycle 13 Capabilities

Summary

- CfP: **March 19** to **April 23** (5 weeks)
- All receiver bands will be offered, including new **Band 2** (for the 12-m array only)
- The OT choice between Band 2 and 3 will be described in the Cycle-13 Proposer's Guide
- Largest configurations **C-9** & **C-10** offered
- Cycle 13 is not impacted by the WSU
- New web-based Observing Tool version (for the Phase-1 submissions only)

Sources of Support

- ALMA Helpdesk

  Questions are usually answered within 48 hours
  Submit a ticket: https://help.almascience.org

- Face-to-face Visitor Support

  The NRAO/NAASC offers face-to-face meetings (online or in-person) for proposal preparation support and data reduction (PI data or archival)

Proposal Writing

Program Category

ALMA Proposal Types

- **Regular Program** (PID 2026.1.xxx.S)
  Time limit: ≤ 50 h (12-m Array)
  ≤ 150 h (7-m stand-alone)
- **Very Long Baseline Interferometry (VLBI)**
  ALMA used as part of a global VLBI network
- **Phased Array**
  Antennas phased together as a single dish
- **Target of Opportunity (ToO)**
  Triggered by unpredictable/transient events
- **Large Program** (PID 2026.1.xxx.L)
  Major, legacy-type projects
  > 50 h (12-m) or > 150 h (7-m)

Joint Proposals

Facility	Available Time
JWST	115 h /cycle
VLA	50 h /year
VLT	50 h /year

Two or more observatories are required to achieve the science

- ALMA has agreements with JWST, VLA and VLT
- Science review by the **main** observatory plus technical review by all observatories
